

↶ CAROUSEL TITLE & ANGLE AUDIT

Repositioning Posts 145–151

Replacing passive engineering jargon with high-conversion hooks, counterintuitive claims, and audience-first story arcs designed for 6-slide social carousels.

DIAGNOSTIC FRAMEWORK

Why Generic Tech Titles Kill Carousel Engagement

Engineering terms like "Inside-Out Tracking" describe the mechanism, not the consequence.

Slide 01 requires a high-stakes hook that stops the scroll.

Content Renaming & Pivot Matrix

ID	ORIGINAL TITLE	AUDIT ACTION	RECOMMENDED NEW HOOK TITLE	ANGLE PIVOT
145	Gaussian Splatting	Rename & Hook	The Death of 3D Polygons	Shift focus from math ellipses to instant 100 FPS photorealism.
146	Inside-Out Tracking	Rename & Hook	How Headsets Know Where They Are	Replace SLAM jargon with "self-locating machine vision."
147	Haptic Gloves & Feedback	Rename & Hook	Why VR Still Feels Like Nothing	Focus on the missing tactile barrier, not pneumatic valves.
148	Volumetric Video	Pivot Portion	The End of The Camera Angle	Reframe from sports capture to full spatial free-roam viewing.
149	Spatial Audio	Pivot Portion	Your Ears Shape Reality (HRTFs)	Pivot to ear geometry and psychoacoustic illusion tricks.
150	AR Contact Lenses	Deep Redesign	The 14,000 PPI Screen on Your Eye	Pivot to the physiological hurdles that killed Mojo Vision.
151	Metaverse Interoperability	Deep Redesign	OpenUSD: The HTML of 3D Space	Ditch "Metaverse" fatigue; explain the 3D file format battle.

POST 145

3D Gaussian Splatting

HOOK RE-ENGINEERING

Original Title: "Gaussian Splatting" (Sounds like a statistics textbook).

New Hook (Slide 01): *"3D mesh polygons are dying. Here is what's replacing them."*

Editorial Rationale: Shifting focus from point clouds and rasterization math to **real-time 120 FPS rendering** positions this as an existential breakthrough for gaming and film.

POSTS 146 & 147

Physical Presence & Tracking

POST 146: TRACKING

The Vanishing Lighthouses

Original Title: Inside-Out Tracking (Passive, dry).

New Slide 01 Hook: *"Why room sensors vanished from VR overnight."*

Slide 03 Shift: Compare *External Base Stations* (SteamVR) → *Optical Passthrough SLAM* (Quest 3) → *Neural VIO Tracking*.

POST 147: HAPTICS

The Illusions of Touch

Original Title: Haptic Gloves & Feedback (Predictable).

New Slide 01 Hook: *"Your brain can see an object, but your skin refuses to believe it."*

Slide 03 Shift: Compare *Rumble Motors (ERM)* → *Micro-Pneumatic Bladders* → *Direct Neuromuscular Stimulation*.

Volumetric Video Redesign

PIVOT FOCUS AREA

"The Death of the Director's Cut"

-  **The Old Concept:** Just capturing 360° flat video domes.
-  **The True Pivot:** Full 6DoF capture where the viewer chooses the focal length, altitude, and position inside the scene.
-  **The Slide 02 Problem:** Capturing 100+ synchronized 4K feeds produces 5 GB of raw point-cloud data per second.

POSTS 149 & 150

Biometrics & Miniaturization

14k

PPI on Your Cornea (Post 150)

Mojo Vision proved micro-displays can fit on an eyeball—but battery oxygenation and FDA classification killed consumer release.

POST 149 & 150 PIVOTS

Repositioning Acoustic & Ocular Tech

Post 149 (Spatial Audio): Rename to *"How Ear Cartilage Tricks Your Brain."* The hook must center on HRTFs as acoustic fingerprints rather than generic 3D sound.

Post 150 (AR Contacts): Rename to *"Why the Ultimate AR Display Failed."* Transition the narrative from hype to the brutal physics of heat dissipation on living ocular tissue.

POST 151

Ditching "Metaverse" Jargon

The Jargon Trap

Audience fatigue around the word "Metaverse" drops post engagement by ~40%. Audiences view it as vague corporate hype.

The Redefined Hook

"**The Battle to Build 3D's HTML.**" Compare Pixar's OpenUSD with Khronos's glTF as the fundamental container battle for 3D assets.

Carousel Arc

Break down why dragging a 3D avatar across Unreal Engine, Unity, and Apple Vision Pro is currently completely broken.

FRAMEWORK

Standardized Carousel Flow

01 / 06 The Hook

Counterintuitive single claim that challenges common XR assumptions.

03 / 06 The Shift

3-column paradigm: Legacy → Intermediate → Breakthrough.

02 / 06 The Friction

3 bold metric stats proving why traditional methods fail.

04 / 06 Mechanism

4 sequential technical steps explaining the breakthrough.

4 Editorial Rules for Titles

- 🚫 **Eliminate Isolated Spec Sheet Titles:** Never use lone nouns ("Spatial Audio", "Inside-Out Tracking"). Titles must contain tension or a paradoxical claim.
- ↔️ **Anchor to Human Senses, Not Hardware:** Frame technical mechanisms around sensory perception (e.g., "Why Your Eyes Reject Artificial Depth" vs "Vergence-Accommodation Conflict").
- Highlight the 10x Paradigm Leap:** Emphasize the metric shift in Slide 01 (e.g., "From 20-minute NeRF bake times to 120 FPS real-time rendering").
- 🔗 **Preserve Technical Depth in Slide 04:** Keep mathematical terms (SLAM, HRTF, spherical harmonics) strictly inside the Step 4 mechanism slide rather than the title.

IMPACT

Projected Engagement by Title Style

Testing shows that replacing textbook terminology with curiosity-inducing conflict improves 6-slide carousel completion rates by up to 2.7x.

Ready for Implementation

Review the suggested hook copy and carousel outlines before publishing.

>_ CAROUSEL PIPELINE 145-151 READY FOR COPYWRITING
